Devoth's HEX 2 RGBA Color Calculator

Let's you convert color value in HEX to RGBA and RGB, prepared for inclusion in *css styles*.

Convert your color:

HEX value (e.g. #f00, #812dd3, ba3, F924A4)	RGB color values
<input type="text"/>	R <input type="text"/> G <input type="text"/> B <input type="text"/>
Opacity: 100%	RGB for CSS
<input type="range"/>	<input type="text"/>
<input type="checkbox"/>	RGBA for CSS
<input type="checkbox"/>	<input type="text"/>

This CSS calculator was built for lazy people like myself. There are many great RGB color converters out there, but usually they give you result in three separate fields (R, G & B), which is kinda annoying because 99% times when I need an RGB value from HEX, I need to paste it to some CSS rule. So why copy/paste from three fields, when you can have it in one field - nicely baked for CSS inclusion.
